

# Millogic Configurable Video Platform

## Features:

- Independent dual input and outputs
- Multiple Formats: NTSC, PAL, SVIDEO
- Independent video (No GenLock required)
- Highly configurable Encoders and Decoders
- FPGA platform for Video Processing Functions
- User defined Analog and Digital control inputs
- User defined Digital status outputs
- FPGA personality defined by socketed PROM

Note: The initial physical embodiment utilizes S-Video and SMA Video connectors and does not include the A-D converter. The original video function was a video multiplexor / demultiplexor.
